Fire and Smoke Resistant
Dampers / Air Transfer Grilles
Fire and smoke protection measures are provided as a life saving precaution. This places a great responsibility on designers and manufacturers – they must have complete confidence in the measures they recommend.

Lorient is an acknowledged leader in the design and manufacture of a wide range of sealing systems embracing fire and smoke control, acoustic and thermal containment, and weather exclusion.

The company operates from the UK, Australia, Hong Kong, North America and the Middle East.

With more than 30 years of experience and accumulated knowledge, Lorient also enjoys an enviable reputation for innovation, technical excellence and product quality.

Lorient has its own professionally staffed research and development facility, with a comprehensive range of development and testing equipment, including colour-matching machinery, a smoke chamber, specialised performance rigs, and an analytical laboratory. In addition Lorient also has its own acoustic laboratory.

This dedicated technical and development resource not only provides successful innovation for the company, but also helps Lorient to partner its customers in developing and testing their own products.

Lorient operates under the strict disciplines of BS EN ISO 9001:2000 quality procedures and the products are supported with CERTIFIRE certification. The Lorient commitment to independent approvals demonstrates ongoing responsibility and accountability for the performance of the company’s products, undertaken at the highest possible level.

</table>
When fire breaks out in a building the threat is twofold. Firstly, there is the fire itself and the hot smoke generated in the immediate vicinity. Secondly, there is cold smoke which, if unchecked, spreads rapidly, preceding the fire and hot smoke, threatening people and property some distance from the fire.

**Design Needs**

Every year in the UK alone some 491 people are killed and 14,000 injured in fires, many of the casualties being attributable to breathing the toxic products of combustion from a remote fire. Fire and smoke also cause extensive damage to building fabric and contents. It has been estimated that the total value of fire related losses is some 3.3 billion per annum*. The majority of these deaths, injuries and losses occur in buildings where fire and smoke protection measures have been inadequate.

* source: Department of Communities and Local Government, 2004.

**Regulatory Requirements**

The Building Regulations require large buildings to be sub-divided into smaller volumes or areas bounded by building elements which resist the spread of fire and smoke. Building a fire resistant wall or floor is a relatively simple task. However, systems of natural and mechanical ventilation require the movement of air through ducts and grilles formed in fire resistant constructions. Ensuring these airways remain open and yet provide protection against fire, hot smoke and cold smoke is a more complex problem.

**The Solution**

The Lorient solution is to fit fire containment air transfer grilles at the point of penetration. Under normal circumstances these allow air to pass freely between compartments. However, in the event of fire the slats and framing components swell to many times their original thickness, fusing together to form a non-combustible mass which provides fire resistance to match the surrounding construction and prevents the passage of hot smoke and gases. The fire containment air transfer grilles contain no moving parts which results in low maintenance.

The Lorient range of intumescent air transfer grilles combined with automatic smoke control systems provides protection against cold smoke. These electrically powered dampers are connected to a standard smoke or fire alarm/detection system which, when triggered, causes the dampers to close thereby preventing the passage of cold smoke. Under normal circumstances the dampers remain open allowing the free passage of air.

The requirements for fire and smoke containment with respect to ‘means of escape’ are contained in Approved Document B (England and Wales), Technical Booklet E (N. Ireland), Technical Handbook Section 2 (Scotland). It is vital that means of escape are not endangered by fire and smoke transmission through doors or ventilation ducts.

**Relevant Standards**

There are several British Standards which relate to the products and solutions featured in this brochure. They include:

- BS 476; Pt. 22: 1987: Methods for determination of the fire resistance of non-loadbearing elements of construction
- BS 476: Section 31.1: 1983: Methods for measuring smoke penetration through doorset and shutter assemblies
- BS 5588: Fire precautions in the design and construction of buildings. (An Approved Document for compliance with Building Regulations)
- BS EN 1634-1:2000: Fire resistance tests for door and shutter assemblies. Fire doors and shutters
Ventilation with Fire and Smoke Protection

Designers recognise the need for buildings to be well ventilated for the health and comfort of occupants. Frequent changes of air flush out airborne infections, and warm and cool air need to be circulated to maintain comfortable temperatures.

**Ventilation through Doors, Walls, Floors & Ceilings**

A study of regulatory requirements reveals that nearly all internal fire resistant doors (and, therefore, the walls in which they are located) also need to provide protection against cold smoke. Any steps taken to allow ventilation through such walls and doors must not allow the passage of cold smoke in the event of fire.

The common practice of undercutting the door in the belief that the threshold is a low risk area has now been totally discredited. It creates a major smoke hazard. Similarly, fitting a conventional grille to a wall or door will totally negate other measures taken to prevent the spread of fire, hot smoke and cold smoke.

Lorient intumescent air transfer grilles and automatic smoke control systems provide protection against fire, hot smoke and cold smoke.

**Ventilation through Ducting**

Experience has shown that ducting can, in the event of fire, provide a conduit for fire, hot smoke and cold smoke. An intumescent fire damper, fitted into the duct at the point where it penetrates a fire resistant construction, will prevent the passage of fire and hot smoke. Lorient intumescent fire dampers fitted in conjunction with a Lorient automatic smoke control system will also provide protection against cold smoke. They have been shown by specific testing to be equivalent to a conventional damper, not only in fire and smoke barrier properties but also by exhibiting insulation values.

Lorient fire resistant dampers / air transfer grilles can be:
- factory fitted in a tested fire resisting doorset
- “retro fit” to an already installed fire door
- fitted in fire resisting walls, partitions, floors and ceilings
- installed in duct work (LVC40, LVH44, LVHC44 and LVH64)

**Fire and Smoke Resistant Dampers / Air Transfer Grilles**

System benefits include:
- A comprehensive range of dampers / air transfer grilles providing protection against fire and smoke at all temperatures
- Test evidence second to none
- Fire performance ratings from 90 minutes to in excess of 180 minutes
- Fully tested for smoke performance
- Products for all applications - doors, walls, ducts, floors & ceilings
- Low maintenance
- Co-ordinated with other Lorient products and ironmongery
Product Range

Listed below are the features and attributes of each product in the Lorient damper / air transfer grille range. Further information on the products, including sizes, shapes and finishes, can be found on pages 10 and 11.

Application details and additional performance information can be found on pages 13 to 18.

Non-vision Style **LVN20 and LVN25**

- can be used to provide up to 60 minutes resistance to fire and hot smoke
- angled slats ensure complete visual privacy
- supplied in two halves to accommodate different door thicknesses
- complete seal achieved in approximately five minutes when tested in accordance with BS 476: Pts. 20 & 22
- allows bi-directional air flow
- easy to keep clean
- contain no moving parts
- no site testing is necessary

Vision Style **LVV40 and LVC40**

- can be used to provide up to 60 minutes resistance to fire and hot smoke
- excellent airflow characteristics which result in silent efficient operation in normal use
- complete seal achieved in approximately five minutes when tested in accordance with BS 476: Pts. 20 & 22 and BS EN 1634-1: 2000
- allows bi-directional air flow
- simple to install
- no maintenance required
- contain no moving parts
- resistant to clogging
Heavy duty intumescent air transfer grille / fire dampers designed for use in aggressive environments.

- can be used to provide up to 180 minutes resistance to fire and hot smoke
- complete seal achieved in approximately two minutes when tested in accordance with BS 476: Pts. 20 & 22 and BS EN 1634-1: 2000
- exhibit excellent airflow characteristics and give silent efficient operation with normal to high air velocities
- can be used in ducting where the steel and aluminium casing protects the intumescent material from the corrosive effect of hot gases travelling at high velocities

High performance Vision Style **LVH44 and LVHC44**

- can be used to provide up to 180 minutes fire resistance
- have a steel frame which contributes to fire resistance by preventing the inward deformation of surrounding structures thus protecting the intumescent materials
- resistant to vibration damage
- suitable for horizontal and vertical applications
- suitable for external applications
- low maintenance
- contain no moving parts

**LVH54**

- has been specifically designed to meet the tough requirements of BS ISO 10294 Pt. 5
- forms a complete seal within 2 minutes
- can withstand a 300P pressure differential across the damper
- maintains its fire integrity for a period of four hours
- has a zintec steel frame and stainless steel slat, which is ideal for harsh duct environments, including high humidity
- suitable for vertical applications
- low maintenance
A sudden increase in temperature resulting from the presence of flames or hot gases causes the slats and framing components to swell to many times their original thickness, fusing together to provide an effective barrier to the passage of fire and hot smoke.

Lorient fire containment air transfer grilles / dampers are made up of either PVC or metal slats with an intumescent core.

Operation - Vision, Non-vision and High Performance Styles

Lorient Smoke Control System

All ducts and airways in doors and walls can be protected against fire and hot smoke using Lorient intumescent air transfer grilles. However, these grilles will not prevent the passage of cold smoke which can be equally dangerous.

Damper / Shutter Assembly

To address this problem Lorient has developed a smoke damper assembly for use in conjunction with Lorient intumescent air transfer grilles.* The assembly comprises three slotted plates - two fixed plates sandwiching a central moving plate. The central plate is operated by a fail-safe motorised actuator. A movement of just 10mm changes the relative positions of the slots from “through flow” to “fully closed”.

*Note: ‘S’ suffix added to product code. Shutter assembly cannot be added to standard air transfer grilles retrospectively.
Control Systems for Smoke Damper Assemblies

The Talkback system can control up to sixteen dampers and features a status monitoring display.

**Talkback Damper Control System**
Most large buildings require a significant number of FD30S and FD60S fire doors (30 or 60 minute fire doors which also provide protection against cold smoke) within any one fire zone. These doors may be a considerable distance apart, or even on different floors.

The Talkback system has been designed to control up to sixteen damper assemblies from one centralised status monitoring unit. A unique 2-way communication system operates between the Damper Control and Monitor Unit (DCM) and the damper actuators. This facilitates a rapid assessment of the status of the installation and immediately identifies and locates any defective dampers.

**Talkback is designed to give peace of mind to a building's occupants in that it:**
- is fail-safe – the dampers will automatically close in the event of an alarm, power failure or damage to the wiring
- resets automatically – when the alarm is cancelled or power restored
- is self-testing – every 24 hours the dampers are automatically closed and opened to check they are working and to dislodge any dust and debris between the moving parts
- continuously monitors the status of each damper and displays this on the DCM
- is easy and quick to install – simple loop wiring is used and the damper units are supplied ready assembled and tested
- uses a safe 12V DC supply to open and close the dampers
- has been successfully tested in accordance with the requirements of the Electro Magnetic Compatibility and Low Voltage Directive and therefore bears the CE mark (copies of the relevant test reports are available on request)

**Typical Installation of the Lorient Talkback System**

A: Door mounted fire and smoke dampers  
B: End of duct fire and smoke dampers  
C: Wall mounted fire and smoke damper  
D: Power and monitor unit  
E: Fire point  
F: Smoke sensors  
G: Fire alarm
Performance

The dampers are supplied factory assembled and tested. When used in conjunction with Lorient fire containment intumescent air transfer grilles, tests have shown that they provide an effective barrier to fire and smoke at all temperatures.

It is therefore possible to create airways through fire resistant constructions and still meet the requirements of Building Regulations and the recommendations of BS 5588. The graphs show the estimated smoke leakage rates determined from tests carried out under the conditions of BS 476: Pt 31.1. The results have been interpolated to show the leakage rates using different sizes of damper/shutter assemblies.

Installation

Lorient provides free technical support for the design, specification and installation of its smoke control systems.

Given the importance of the protection provided, it is recommended that Lorient is involved in the earliest stages of specification to ensure the most effective and economical system is specified and installed.

A comprehensive technical companion which covers the design and operation of Lorient smoke control systems is available; please consult our Technical Department.

FIRE AND SMOKE RESISTANT DAMPERS / AIR TRANSFER GRILLES

**Damper & actuator**
- 26mm grille
- PVC flange
- 5.5mm grille
- Aluminium flange
- 24mm grille
- Steel flange

**Smoke Control System**
- Talkback
- DCM

**Cover Grilles**
- Optional cover grilles for walls, doors and ends of ducts
- Pressed steel and aluminium options available
- Weather louvre options available for use on external applications (refer to Lorient for details)

**Product Specifications**
- LVHCTD duct mounted fire and smoke damper
- LVH44
- LVH54
- LV4V0
- LVH44
- LVH20S
- Zintec steel
- DCM off-white
- Screws fixed

**Flanges**
- LV1826
- LV2516
- LV2221

**Cover Grilles Flanges**
- Screws fixed
- Refer to Lorient for details

**Modular systems**
- Available, please ask for details

**Smoke Control System**
- Sizes available are: 200mm – 600mm (in 50mm increments)
- Modular systems are available, please ask for details

**NB:**
- For special applications, the Lorient smoke dampers can be used on their own. Please refer to Lorient’s Technical Department
- Will change the free air flow characteristics of the air transfer grille
- Pressed steel, white, silver, primer or mill matching colours are available: aluminium, natural satin anodized / powder coated

**Optional cover grilles**
- Pressed steel and aluminium options available for use on external applications (refer to Lorient for details)

**Sizes to suit standard dampers / air transfer grilles**
- Larger sizes available (refer to Lorient for details)
The following pages show the levels of protection provided by Lorient fire resistant dampers / air transfer grilles when used in doors, compartment walls, ducts, floors and ceilings.

### Use of symbols
- ![Fire Icon] indicates that the application detail shown provides protection against fire.
- ![Cold Smoke Icon] indicates that the application detail shown provides protection against cold smoke.
- ![Minutes Icon] indicates in minutes the fire protection provided by the intumescent air transfer grille / fire damper.

Mastic

Lorient produces intumescent mastic for bedding in dampers / air transfer grilles.

- When exposed to fire, it will expand to many times its original volume while maintaining adhesion
- Suitable also for sealing gaps between fire resistant walls and floors, between conduits and walls/floors and between fire resistant walls and structural supports

Finishes

Fire door assemblies and dampers / air transfer grilles are often chosen for their appearance as well as their performance.

Standard Colours

- Silver (0701)
- White (0303)

Note: The limitations of the printing process means the colours and finishes shown here may not be exactly the same as the grilles supplied. Lorient can supply samples to assist colour matching.

Special Colours

Lorient offers a colour matching service and can usually formulate a precise colour match on receipt of appropriate details such as a BS or RAL colour reference or a material sample. A modest set up charge is made to cover costs, please ask for further details.

PVC/steel flanges and air transfer grilles can be colour matched.

Additional information

Technical References

Lorient is quality assured under the disciplines of BS EN ISO 9001: 2000.

Accreditation to this standard is effectively a guarantee of Lorient’s ability to conduct its business to the complete satisfaction of the customer in terms of design solutions, manufacturing consistency and management procedures.

The status of this internationally recognised accreditation generates customer confidence and eliminates the risk of poor performance. Regular audits of the company procedures are carried out by qualified BSI staff to ensure continuing compliance with all aspects of the Standard.

Handling and Storage

No special precautions are required when handling Lorient dampers / air transfer grilles but they should always be treated with care.

The products do not fall within the scope of COSHH regulations.

Lorient dampers/air transfer grilles should be stored away from heat, in the dry, and protected from impact damage.

Maintenance

Lorient intumescent air transfer grilles, including those positioned behind cover grilles, will require periodic cleaning with a damp cloth.

The use of intumescent materials means there are no moving parts.

The product is trouble free in operation and easy to maintain – periodic testing is unnecessary.

Trade Associations

Lorient is a member of the Glass and Glazing Federation Fire Resistant Glazing Group (GGF) and is a founder member of the Intumescent Fire Seals Association (IFSA).

Lorient is also an associate member of the British Woodworking Federation (BWF), the Architectural and Specialist Door Manufacturers Association (ASDMA), the Guild of Architectural Ironmongers (GAI) and is also an Approved Supplier to the BWF CERTIFIRE Fire Door and Doorset scheme.
Continuing Professional Development Seminars

Lorient offers two fully accredited CPD seminars. Impartially presented by knowledgeable speakers, the seminars are structured to be technically informative.

Performance Door Design:
The Basics of Sound Reduction

Effective acoustic containment helps to improve the quality of the built environment, preserving privacy as well as excluding unwanted noise. With changing regulations, it is essential to be informed of the relevant requirements and the implications for door assemblies.

The acoustic CPD seminar covers:
- The nature of sound, examining airborne transmission of sound
- Regulatory requirements and British Standards that relate to acoustic performance
- Test procedures and interpretation of test reports
- Effective design of door assemblies for acoustic performance, including door construction and the influence of sealing systems
- Design conflicts between acoustic performance, durability and ease of operation of the door
- Independent accreditation

The Role and Performance of Fire and Smoke Resisting Door Assemblies

The importance of fire and smoke resisting door assemblies is illustrated by the 491 annual deaths in fire tragedies in the UK alone. Apart from the human toll, property losses each year approach £3.3 billion.

The fire and smoke containment CPD seminar covers:
- Hard facts concerning deaths, injuries and property damage caused by fire and smoke
- Regulatory requirements for fire and smoke-resisting door assemblies
- The nature and behaviour of smoke
- Effective design of door assemblies for smoke containment, including the threshold gap
- Design conflicts between fire containment, smoke containment, durability and ease of operation of the door
- Independent accreditation

Both Lorient seminars are certified by the Construction CPD Certification Service and each is valued at one hour. Comprehensive notes are provided and attendance certificates awarded.

If you are interested in booking either seminar, please contact the Lorient Marketing department or e-mail cpd@lorientuk.com
Lorient continues to lead the way in research and development with an enviable reputation for innovation and technical excellence, something that only 30 years of experience can bring.

**Technical Services**
Lorient provides specialist advice on acoustic, smoke and fire protection for refurbishment and new build projects. If you need assistance, you can call our telephone help line.

Alternatively, we can arrange a site visit to get a clearer idea of your needs and how we can help you. We also provide copies of test reports and samples where needed and can give guidance on how best to meet Building Regulations and Standards.

**Customisation**
If you have a particular requirement which isn't covered by the applications in this brochure, we may be able to supply an existing non-standard item, or even develop a customised solution for you.

**Web Support**
We have a comprehensive, user-friendly website which features our extensive range of products, CAD drawings and details on the services we offer. Lorient's entire collection of brochures can be downloaded as can copies of certification and specification texts.
